SYMPTOMS OF DIABETES

- Tingling, or Numbness in Hands and/or Feet
- Excessive Thirst
- Frequent Urination
- Urinary Infections
- Lack of Energy
- Impotence
- Increased Appetite
- Blurry Vision
- Sudden Weight Loss
- Wounds That Won’t Heal

If you are experiencing any of the above symptoms, please consult with your doctor.

Diabetes increases your risk for many serious health problems. Early detection and treatment of diabetes can decrease the risk of developing the complications of diabetes.
